Consultation and review version

2026 — 2030

The 2026–2030 plan: what do we want to improve?

Better learning, more useful training and greater benefit to the community. Your experience can help us choose priorities.

Six connected directions

- Teaching and learning
- Clinical training
- Local research
- Community partnerships
- People and resources
- Institutional continuity

A gradual plan connecting learning, practice, research, community work, resources and institutional continuity.

01 The plan guides the faculty during 2026–2030. Work will proceed gradually, according to available capacity and resources.

02 This is a consultation and review version. It does not mean that the proposals have been approved or their results achieved.

03 After the presentation, answer a short set of questions about your experience. Choose “I cannot judge” when you do not know enough about a topic.

Vision and mission

Our direction: nursing education connected to patients and the community

The following vision and mission come from the draft plan. They explain its overall direction.

One General Nursing programme brings together knowledge, skills and professional behaviour.

Professionalism, patient safety, community responsibility, realistic action and teamwork guide our work.

Vision

To be an active educational and community institution that prepares qualified nursing staff and promotes health awareness and positive community behaviour, contributing to better healthcare and meeting local community needs.

Mission

The Faculty of Nursing at Tobruk University is committed to preparing qualified General Nursing graduates with the scientific knowledge, clinical skills and professional behaviour needed to serve patients and the community. It does so through realistic teaching, organised clinical training, research and graduation projects connected to local health issues, and community activities that promote health awareness and positive behaviour, in partnership with health and community organisations.

Six connected directions · 1 / 6

1. Teaching, learning and student success

We want students in all years to learn and make academic progress, with suitable support.

01

01 Specialist review of the prepared course specifications remains to be completed. Teaching and assessment are reviewed, and course reports inform improvements.

02 The academic advising unit is established. Support is intended for students in all years, according to their needs.

03 The next step is to provide support and follow it up. Examples include a clear learning resource, guidance or a study method suited to a specific difficulty.

What we want to improve: Learning and academic progress across all years.

Six connected directions · 2 / 6

2. Clinical training and graduate readiness

We want organised clinical experience and safe performance that can be observed and assessed.

02

01 Improve the organisation of experience, supervision and assessment with training providers.

02 Use feedback from students, supervisors and graduates to identify skills needing further support.

03 Existing digital simulation is a supporting resource. Its content and value should be reviewed and tested before expansion; it does not automatically replace required clinical training.

What we want to improve: Organised clinical learning and observable safe practice.

Six connected directions · 3 / 6

3. Good local research that can be used

We want research and graduation projects connected to real needs, producing useful knowledge.

03

01 Choose local health and nursing topics that can be studied with available capacity.

02 Review methods, ethics and analysis, organise research files and strengthen research skills.

03 Follow up the use of a selected finding in education, training or community work. Counting or sending research is not enough.

What we want to improve: Good local knowledge that can be used.

Six connected directions · 4 / 6

4. Useful community work and partnerships

We want activities responding to clear needs, and partnerships producing benefits we can follow up.

04

01 Choose a focused activity with beneficiaries and partners, such as improving a specific health knowledge area, skill or behaviour.

02 Activate selected agreements with a practical output and a confirmed contribution from each partner.

03 Listen to students, graduates and the community, and follow up a suitable result rather than relying only on attendance or photographs.

What we want to improve: Activities and partnerships addressing real needs.

Six connected directions · 5 / 6

5. People, resources and a supportive learning environment

We want to use staff capabilities and existing resources well, then address gaps by priority.

05

01 Develop staff skills and allocate work according to expertise, availability and workload.

02 The portal, library and digital resources have been developed. Their quality, coverage, accessibility and usefulness still need review.

03 The faculty identifies facility, laboratory and technology needs, submits requests and follows them up. Spending, maintenance and resource provision are University responsibilities, subject to available Ministry support.

What we want to improve: Better use of existing capabilities and resources.

Six connected directions · 6 / 6

6. Clear, reliable and continuous institutional work

We want services to continue and decisions to use useful information, while reducing duplicated work.

06

01 Keep responsibilities clear and connect the plan to existing work records and reports.

02 Keep documents and data organised and protected, making retrieval and handover easier when staff change.

03 Test suitable alternatives during disruption, then review what helps and what should be changed or stopped.

What we want to improve: Clearer services and institutional work that continues.

Share your feedback

How will your feedback help?

We are looking for clear priorities, real obstacles and feasible contributions—not agreement with everything.

01 Responses can help choose what starts first, improve proposals and identify needs requiring support outside the faculty.

02 Answer from your experience and choose the priority most important to you. You may disagree or say you cannot judge.

03 A suggested contribution is voluntary and depends on time, expertise and agreed arrangements. It is not a funding promise or an assignment.

Now, share your perspective

Choose the role closest to your experience and answer the questions relevant to you. You may disagree or choose “I cannot judge”.

Open the survey and share your feedback

How can your experience contribute?

Students

Describe a real learning difficulty or try an existing resource and give specific feedback.

Teaching assistants

Suggest limited support within your expertise, authorised role and available time.

Teaching staff

Identify a small teaching or assessment change, or a resource needing review.

Employees

Identify a repeated step or service that could be simplified using existing work.

Employers

Identify a required skill or share general observations of graduates’ work.

Training providers and placement sites

Identify an opportunity or obstacle in training, supervision or assessment.
